

A simple change. A powerful solution.

H2O3

Get on the right side of science.

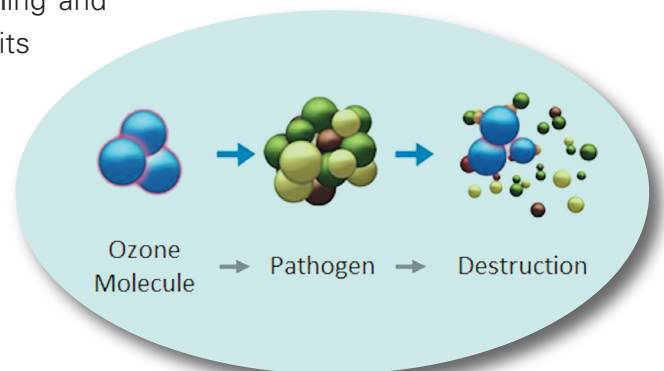

Consumer confidence...in places where people meet to play and eat, it's paramount. During the industry's post-Covid "new normal" and beyond, you'll have to re-earn that trust each time a family walks through your doors. Your job is to keep adults and children safe from injury and illness—and keep them coming back.

There has never been a smarter time to make the switch from expensive and potentially toxic chemical-based cleaners and disinfectants to water-based SAO—Stabilized Aqueous Ozone—which is **100% effective at inactivating all pathogens common to your industry**.

An **H2O3 SAO System** replaces ALL of the chemical products you currently use in your foggers, spray bottles and sanitizing stations with an **FDA, EPA and CDC** recognized pathogen-killing solution... using nothing but electricity and tap water. **SAO works on contact**—reducing exposure to harmful pathogens and odors without leaving any residue, while conforming to your industry's cleanliness programs and protocols.

A Simple Change

The H2O3 Stabilized Aqueous Ozone system **installs easily and uses your current tap water and electricity** to electrochemically replace virtually every cleaning and sanitizing chemical in your business. The key to the system is its patented stabilization—which ensures that the aqueous ozone retains its pathogen-killing power for **up to 24 hours**—from opening to closing each day. The stabilization technology was developed by **Tersano** more than 15 years ago and has been deployed in more than 30,000 locations around the world, including **hotels, universities, hospitals and apartment complexes**.

A Powerful Solution

There are many ways to measure the return on investment (ROI) of a changeover to the SAO system. First and foremost, you will be **eliminating the purchase of 95-to-100% of all the cleaning products** each of your locations currently purchases. Often, that return will cover the entire cost of the system in a matter of a few months. Another benefit is lots of “found space” in areas where your cleaning products are currently being stored.

Then there is the “human” ROI: An SAO system demonstrates a commitment to your employees and patrons that you have invested in their health and well-being, improving safety, comfort and confidence at a critical time—and increasing the chances of **retaining your best workers and repeat customers**. Getting on the right side of science also communicates your commitment to environmental stewardship—a key factor in **booking a corporate events**. Every business is telling customers they are reopening better and safer than ever. H2O3 helps you put **real science** behind that messaging!

Build a Culture of Sustainability

Unlike anti-microbial coatings and other chemicals (including hydrogen peroxide) commonly used in the cleaning of topical surfaces in indoor amusement spaces, **SAO is 100% residue-free** and reverts to water and oxygen after cleaning and sanitizing. Nothing harmful enters the environment or touches your customers or staff.

Just as important, no chemicals enter your HVAC system. **The chemical-based sanitizers you use now leave a microscopic film that dries and flakes off during play.** This allergy-triggering residue is then recirculated throughout your facility, often causing respiratory stress.

Let your customers know you're safe, sound, clean and green...

...and on the right side of science.
