

A simple change. A powerful solution.

# H2O3

Get on the right side of science.

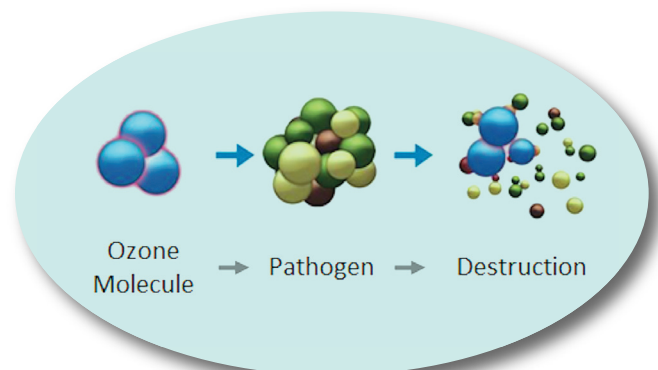

On the very best of days, the job of a facility manager is like a three-dimensional chess match. Whether it be a country club, a health club—or any place where members gather to play, eat, drink or just relax and enjoy one another's company—keeping countless moving parts working together requires years of experience and 24/7 attention. **Covid-19 only increased the challenges and upped the stress level among members and staff.**

As we emerge from the pandemic, ensuring **the safety and well-being of members and their guests** has become the new paramount concern...all while still keeping a sharp eye on the **bottom line**.

**That is why there has never been a smarter time** to make the switch from the conventional chemical cleaners and disinfectants that your facility currently uses to H2O3's water-based **Stabilized Aqueous Ozone (SAO)**. The EPA, FDA and CDC have recognized SAO's superior pathogen-inactivating properties for decades. It destroys viruses and bacteria—including SARS, MRSA, E. coli and Covid-19—on all topical surfaces, including:

- Locker and dressing rooms
- Restrooms, showers and saunas
- Pro and club shops
- Workout and exercise equipment
- Dining, bar and food prep areas
- Banquet halls, meeting rooms, conference spaces and other hospitality facilities
- Pool and outdoor fixtures and furniture
- Golf carts, valet stations, elevators and other facility transportation
- All common areas

## A Simple Change

An H2O3 system replaces 95 to 100% of your current cleaning chemicals by producing SAO on-site, on-demand... **using nothing more than tap water and electricity.** It installs easily and requires no special employee training. After application, SAO reverts back to **water and oxygen**—with **zero topical residue or airborne toxicity** that can **trigger allergic reactions** in members and their guests.

## A Powerful Solution

H2O3's point-of-use sanitizing system is ideal for facilities with multiple vectors for the spread of viruses and other pathogens. SAO will be the new **go-to cleaning and sanitizing source** for your janitorial and maintenance staff. And it will be just as popular with your other employees, who will use SAO to fill inexpensive spray bottles—where it retains its cleaning power for up to 24 hours thanks to the stabilization technology patented by **Tersano**. SAO systems have been deployed in more than 30,000 locations worldwide—including hotels, apartment buildings, hospitals, health clubs and major universities.

*“SAO has proven to be very versatile in applications ranging from our indoor turf field, yoga and stretch mats, fabrics, furniture, and carpets as well as targeted applications in restrooms, locker rooms, and training areas. It’s easy to use and user-friendly.”*

—Thomas Loger • East Bank Club Chicago

## Sustainability Your Members Can See

Clubs that began strengthening their commitment to going green are doubling-down on that commitment in the post-pandemic era—limiting the use of harsh chemicals and cleaners, reducing waste and conserving water use. An H2O3 system checks all of those boxes—and is something you'll want to **tell your members about**. In addition to its awesome pathogen-mitigating power, H2O3 saves money, conserves water and protects the environment.

It tells your members that they are safe, sound, clean and green...

**...and on the right side of science.**
