

A simple change. A powerful solution.

# H2O3

Get on the right side of science.

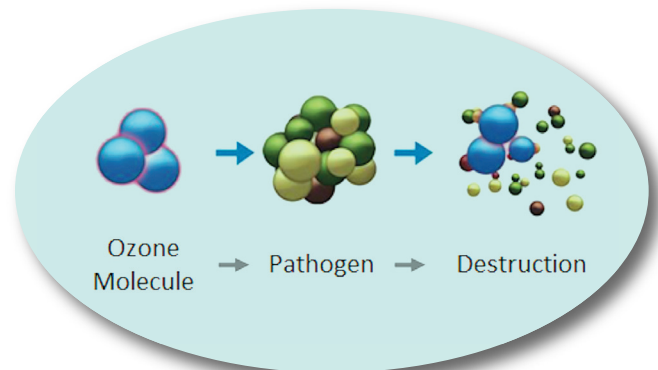

After more than a year of lost opportunity in both business and tourism travel, the hospitality industry is poised to recover and grow starting in the second half of 2021. A key to bringing back business is rebuilding **Brand Trust**, doubling-down on safety and cleanliness protocols...and promoting these changes to **loyalty-program members** and the traveling public.

Making the move away from cleaning chemicals to H2O3's Stabilized Aqueous Ozone (SAO) as your cleaner-sanitizer-deodorizer of choice not only gives you a compelling **"clean and green"** story to tell, it generates **significant short- and long-term cost savings**. It is ideal for cruise lines, casinos, theaters, sports and entertainment complexes and the hotel industry: several independent and chain hotels in Europe and America have already adopted SAO!

## A Simple Change

The H2O3 SAO system installs easily and simply. It uses water and electricity to produce thousands of gallons of pathogen-inactivating cleaning and sanitizing power on-demand. It **replaces 90% or more of the cleaning chemicals you now buy and store** (and eliminates empty containers in your waste)—and turns your Housekeeping and Janitorial staff into true front-line workers and custodians of care for your facilities.

## Stabilized Aqueous Ozone:

- Destroys germs and viruses on contact on all topical surfaces and leaves no odor or residue
- Eliminates SARS-coV-2, MRSA, E. coli and other common pathogens
- Is 100% safe for your employees and guests
- Has zero environmental impact (unlike toxic cleaning chemicals)
- Checks all the boxes on your COVID-19 response program
- Dramatically extends the life of floral arrangements
- Is effective in removing most stains from hotel carpeting
- Cleans and sanitizes food products (preventing spoilage) in kitchen and dining areas

## A Powerful Solution

H2O3's SAO-producing technology is already in place at more than 30,000 high-traffic locations around the world, including hospitals, universities, health clubs and apartment complexes. It has been a **game-changer for hotels**, cutting costs and shaving critical minutes off of each room turnover. A single SAO spray bottle, produced daily onsite, replaces multiple cleaning products and reduces return trips to the housekeeping cart.

Safe, odor-free SAO is ideal for elevators, check-in, lobby fixtures, meeting rooms and other **heavy-contact guest locations**—including breakfast bars, dining tables and other areas where food and drinks are consumed.

The switch to **H2O3** tells corporate customers and the traveling public that you are safe, sound, clean and green...

...and on the right side of science.
