

A simple change. A powerful solution.

H2O3

Get on the right side of science.

Among the greatest challenges to the pet industry is achieving a balance between a clean, odor-free store for humans and a healthy environment for the growing number of species that customers demand. The need to **control pathogens and prevent diseases** from spreading is crucial to your bottom line. However, ingredients that make cleaning chemicals and disinfectants effective for people can be **highly toxic** to dogs, cats, birds, small mammals, snakes, reptiles and aquatic creatures.

A Simple Change

In a perfect world, a safe and sound **infection-control plan** minimizes or eliminates the use of cleaners that contain hydrogen peroxide, alcohol or bleach. Which is why an H2O3 **Stabilized Aqueous Ozone** (SAO) system is the perfect solution for pet stores, from independent retailers to large, high-volume operations...as well as **breeders, kennels** and **veterinary practices**. SAO leaves no residue, is **100% safe for humans and animals** and is unparalleled as a topical cleaner, sanitizer and deodorizer.

An H2O3 SAO system:

- Installs easily and requires no employee training
- Produces on-demand SAO using your current water and electricity
- Safely eliminates pet odors and is perfect for spot stains and "aisle clean-up"
- Cleans and sanitizes glass, metal and plastic cages, carriers and tanks
- Safeguards animals, customers and employees from cross-contamination
- Sanitizes high-touch points like door handles, store fixtures, checkout areas and backroom surfaces
- Inactivates SARS-CoV-2, MRSA, E. coli and other pathogens faster than bleach
- Replaces floor-cleaning products and is an effective organic stain remover in carpeting

A Powerful Solution

Whether you purchase or lease an H₂O₃ SAO system, by eliminating 90% or more of your cleaning and sanitizing chemicals, your **return on investment** is quick. However, you'll find that SAO "pays for itself" from day one by addressing the #1 incubator and spreader of infection for a wide range of pets: **Water Bowls**. A quick spray of SAO before changing an animal's water **inactivates 100% of pathogens and removes the biofilm**—aka "bowl slime"—that can lead to kidney and urinary tract infections, mouth and throat issues and a host of other serious (and sometimes fatal) medical problems.

Did You Know?

SAO is safe for animals to consume because it reverts to water and oxygen...meaning you can fill a bowl and sanitize it in one hygienic, time-saving step.

Show Them the Way

Consumers look to you to for ways to **optimize pet health** and protect animals from chemicals common to homes, streets and backyards. Switching from toxic cleaners to safe, super-effective Stabilized Aqueous Ozone demonstrates your commitment to **animal safety** and **environmental stewardship**, and sends a powerful message that your fresh-smelling store is...

Safe, sound, clean and green...

...and on the right side of science.
