

A simple change. A powerful solution.

# H2O3

Get on the right side of science.

For generations of retailers, consumer trends and tastes have determined how stores configure their shopping experience. That formula was turned on its head in 2020, with **safety concerns driving buying and merchandising strategies** for retailers big and small. As we enter the post-Covid “new normal,” brick-and-mortar establishments will be making their commitment to cleaning and sanitizing **permanent**—to ensure the continued health and confidence of their customers and employees.

**There has never been a smarter time** to make the switch from the conventional cleaners and disinfectants that your staff currently uses to H2O3’s water-based **Stabilized Aqueous Ozone (SAO)**. The EPA, FDA and CDC have recognized SAO’s superior pathogen-inactivating properties for decades. It destroys viruses and bacteria—including SARS, MRSA, E. coli and Covid-19—on all topical surfaces...**using your current tap water and electricity.**

## A Simple Change

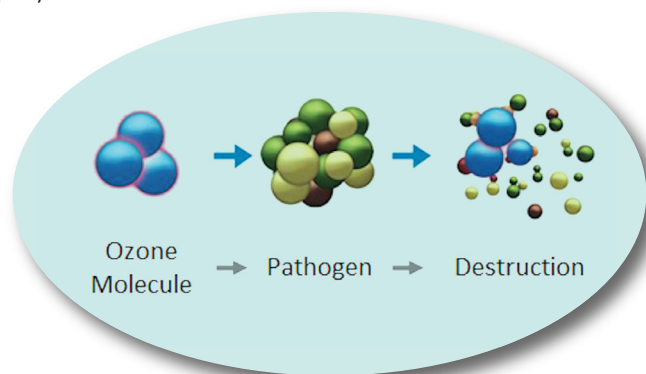

An H2O3 system replaces 95 to 100% of your current cleaning chemicals by producing SAO on-site, on-demand. It **installs easily** and requires no special training. After application, SAO reverts back to **water and oxygen**—with **no residue or odor**.

## An H2O3 Stabilized Aqueous Ozone system in your store...

- Is completely safe for customers and employees
- Can be used to wipe down counters, merchandise and displays
- Is ideal for use in all food prep and eating areas
- Requires no PPE and fosters employee morale
- Creates additional storage space
- Replaces sanitizing chemicals in foggers and other cleaning devices
- Will dramatically reduce packaging waste
- Is laboratory tested and government regulated

## A Powerful Solution

Eliminating the cost of your current cleaning and sanitizing products generates more than goodwill...the **return on investment** does sensational things for your bottom line, too. Manufactured by **Tersano**, these systems are already in more than 30,000 high-traffic public spaces around the world, including hotels, hospitals, health clubs, apartment buildings and universities.

## A Culture of Sustainability

Whether embracing an **ethos of environmental stewardship** is part of your corporate story or not, installing an H2O3 Stabilized Aqueous Ozone system reinforces a positive message to your customers and staff: ***We only have one planet and we need to take better care of it.***

The switch to H2O3 tells the world that you are safe, sound, clean and green...

...and on the right side of science.
