

A simple change. A powerful solution.

H2O3

Get on the right side of science.

The day-to-day success of a Fixed Base Operator demands laser-focus on accommodating the client. From the time passengers first engage with your company to the moment you deliver them safely to their ultimate destination, their safety, comfort and convenience is your responsibility. **Trust is everything; there is no margin for error.** A mistake or oversight at any point can cause untold damage to your business. That is why the **meticulous cleaning protocols** you put in place during the Covid-19 pandemic are certain to become part of everyday operations in the post-Covid era.

Simply put, there has never been a smarter time to make the switch from conventional chemical cleaners and disinfectants to H2O3's water-based **Stabilized Aqueous Ozone (SAO)**.

A Powerful Solution

The EPA, FDA and CDC have recognized SAO's superior pathogen-inactivating properties for decades. It destroys viruses and bacteria—including **SARS, MRSA, E. coli and Covid-19**—on ALL topical surfaces. An H2O3 system produces a limitless, on-demand supply of powerful cleaning and sanitizing product **using your current tap water and electricity**. It is ideal for application in **aircraft interiors**, lobbies and guest amenities...but that's just the start.

With an H2O3 SAO system in place, your company can:

- Offer clients superior “Tip to Tail” interior sanitizing service between flights
- Mitigate passenger allergies, odor sensitivities and skin conditions that are often triggered by cleaning products
- Inactivate all pathogens on luggage and parcels, including handles, straps and zippers
- Simplify cleaning protocols for lounges, meeting spaces and waiting areas
- Eliminate 95 to 100% of cleaning and janitorial chemicals
- Reduce waste and free up valuable storage space
- Deliver sustainability that your customers can see and appreciate
- Actively promote and monetize on-site SAO as part of your suite of services

A Simple Change

H2O3's SAO unit installs quickly and produces on-site stabilized aqueous ozone. It uses an inexpensive, long-lasting cartridge in addition to your current water and electricity, ensuring a quick **return on investment** that keeps giving year after year. SAO is 100% safe and appropriate for bar and food prep areas, and because it is stabilized for up to 24 hours, provides active sanitization in standard spray bottles for aircraft cleaning crews, limo drivers and hospitality staff: Refill the bottles at the beginning of each day and your staff is good to go! There is no easier, safer or more cost-effective way to ensure the well-being and peace of mind of your passengers.

H2O3 lets your customers, staff and business partners know that you are safe, sound, clean and green...

...and on the right side of science.
